PB4000 Printer

Wi-Fi Setup Guide

CONNECT YOUR PRINTER TO WI-FI

HOW IT WORKS

The printer sends out its own Wi-Fi network. › You join that network from your phone and open the setup page. › On that page, you connect the printer to your Wi-Fi.

BEFORE YOU START

- Turn the printer on. Its Wi-Fi turns on by itself.
- Have a phone, tablet, or laptop with Wi-Fi and a web browser.
- Have your Wi-Fi network name and password ready.

1 Find the printer's network name

a. On the printer, press **OK**.

b. Use the arrow buttons to highlight **Information**, then press **OK**.

c. Highlight **AP SSID** and press **OK**.

d. Note the name shown. It looks like **PRT-54187A**.

Write the network name here

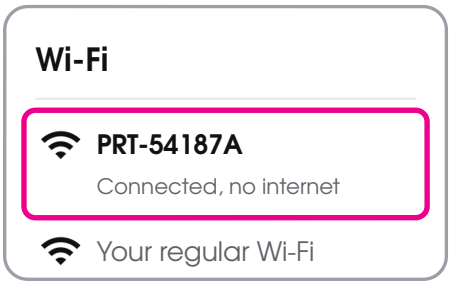

Press OK to open the menu

2 Connect your phone to the printer

a. On your phone, open **Settings** › **Wi-Fi**.

b. Choose the printer's network from step 1.

c. Your phone may warn that this network has no internet connection. That's expected, so stay connected.

Example. Your phone's screen will look different.

3 Open the printer's setup page

a. On the same phone, open a web browser such as Safari, Chrome, or Edge.

b. Type **192.168.200.1** in the address bar and tap **Go**.

192.168.200.1

Wi-Fi Setup Guide

FINISH ON THE SETUP PAGE

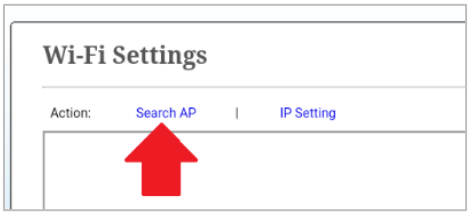

4 Open the Wi-Fi settings

a. On the setup page, select **Network**, then **Wi-Fi Settings**.

b. Select **Search AP** to list the Wi-Fi networks nearby.

Network › Wi-Fi Settings

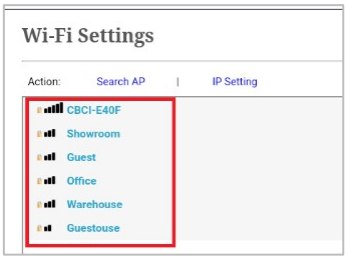

Search AP

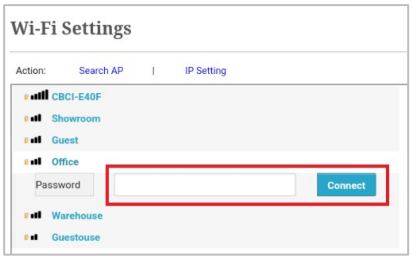

5 Choose your network

a. Select your Wi-Fi network in the list.

b. Enter your Wi-Fi password and select **Connect**.

Select your network

Enter the password, then Connect

6 Finish up

a. The page tells you the wired network will be disabled. That's normal.

b. After a few seconds, the printer's IP address appears on its screen.

c. Reconnect your phone to your usual network.

> The wired network connection will be disabled in a second.
> Please check the available IP on the machine.

The message you will see on the setup page

Write your printer's IP address here

If something goes wrong

I can't find the printer's network on my phone
Make sure the printer is on, then check the name again in step 1. Wi-Fi turns on by itself when the printer starts.

My phone says "No internet connection"
That's expected while your phone is connected to the printer. Stay connected until you finish step 6.

The setup page won't open
Check that your phone is still connected to the printer's network from step 1, then type **192.168.200.1** into the address bar, not a search box.

A message says the wired network will be disabled
That's normal. The printer is switching to Wi-Fi.

The Wi-Fi connection is weak or drops
Keep walls, metal plates, and cordless phones at least 100 mm (4 in.) away from the printer and your Wi-Fi router.

I'd rather set up from a Windows computer
Connect the printer with a USB cable and use the Network Setup Tool. See "Connecting to a Wireless Network" in the user's manual.

Next, install the driver and print: see your Quick Start Guide or **capsuloffice.com/support**

Everything you need, nothing you don't.
