MB3300 MFP

Wi-Fi Setup Guide

CONNECT YOUR PRINTER TO WI-FI

HOW IT WORKS

The MFP sends out its own Wi-Fi network. › You join that network from your phone and open the setup page. › On that page, you connect the MFP to your Wi-Fi.

BEFORE YOU START

- Turn the MFP on. Its Wi-Fi turns on by itself.
- Have a phone, tablet, or laptop with Wi-Fi and a web browser.
- Have your Wi-Fi network name and password ready.

1 Find the MFP's network name

a. Look at the MFP's screen. The name is next to the Wi-Fi symbol. It looks like **PRT-53BEFD**.

b. Not shown? Press **Menu**, go to **Information** and press **OK**, then highlight **AP Mode SSID** and press **OK**.

The network name next to the Wi-Fi symbol

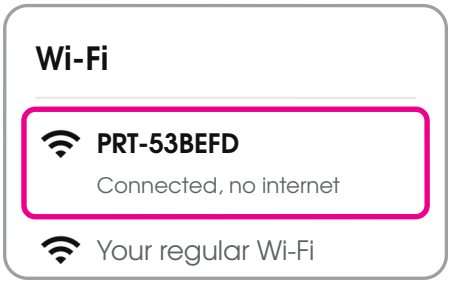

Write the network name here

2 Connect your phone to the MFP

a. On your phone, open **Settings** › **Wi-Fi**.

b. Choose the MFP's network from step 1.

c. Your phone may warn that this network has no internet connection. That's expected, so stay connected.

Example. Your phone's screen will look different.

3 Open the MFP's setup page

a. On the same phone, open a web browser such as Safari, Chrome, or Edge.

b. Type **192.168.200.1** in the address bar and tap **Go**.

192.168.200.1

What it looks like on a phone

Next: turn over to finish setup

Wi-Fi Setup Guide

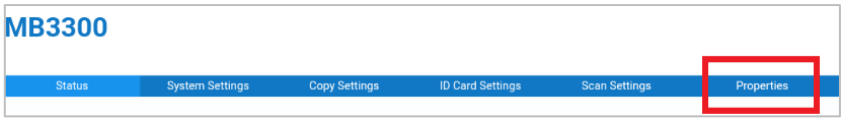

FINISH ON THE SETUP PAGE

4 Open the Wi-Fi settings

a. Select **Properties** at the top right of the page.

b. Select **Wi-Fi settings** in the list on the left.

c. Select **Search AP** to list the Wi-Fi networks nearby.

Properties, top right

Wi-Fi settings

Search AP

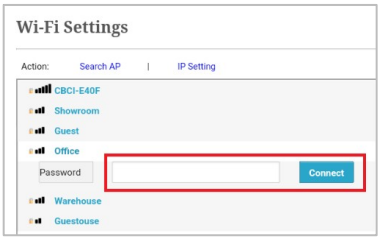

5 Choose your network

a. Select your Wi-Fi network in the list.

b. Enter your Wi-Fi password and select **Connect**.

Select your network

Enter the password, then Connect

6 Finish up

a. The page tells you the wired network will be disabled. That's normal.

b. After a few seconds, the MFP's IP address appears on its screen.

c. Reconnect your phone to your usual network.

> The wired network connection will be disabled in a second.
> Please check the available IP on the machine.

The message you will see on the setup page

Write your MFP's IP address here

If something goes wrong

I can't find the MFP's network on my phone
Make sure the MFP is on, then check the name again in step 1. Wi-Fi turns on by itself when the MFP starts.

My phone says "No internet connection"
That's expected while your phone is connected to the MFP. Stay connected until you finish step 6.

The setup page won't open
Check that your phone is still connected to the MFP's network from step 1, then type **192.168.200.1** into the address bar, not a search box.

A message says the wired network will be disabled
That's normal. The MFP is switching to Wi-Fi.

The Wi-Fi connection is weak or drops
Keep walls, metal plates, and cordless phones at least 100 mm (4 in.) away from the MFP and your Wi-Fi router.

I'd rather set up from a Windows computer
Connect the MFP with a USB cable and use the Network Setup Tool. See "Connecting to a Wireless Network" in the user's manual.

Next, install the driver and print: see your Quick Start Guide or **capsuloffice.com/support**

Everything you need, nothing you don't.
